

Billie - Insoles Technician

As an Insoles Technician, Billie makes custom insoles to keep people on their feet.

Using the latest design technology, Insoles Technician Billie makes custom orthotic devices for people who suffer from a variety of medical conditions, including Diabetes, Plantar Fasciitis and Arthritis.

After her GCSE's, Billie started working for Peacocks as a Trainee Assistant Technician and underwent vital in-house training to get the job she does today.

"At Peacocks we manufacture bespoke insoles for people with injuries or preexisting conditions. I've always been hands on, but after gaining experience within a few different departments, I found working a varied role whilst helping people was the most enjoyable and rewarding for me. I began my position within the insoles department to achieve this, gaining new skills and learning different aspects of the job."

Billie has since gained three Level 2 NVQ's, pursued a manufacturing career and is now a qualified technician after under going three years of comprehensive training.

"I use digital CAD/CAM technologies and traditional hand crafting techniques such as milling, gluing, shaping, scouring and polishing on machinery. I love that no two days are ever the same!"

Technicians make it happen
